

Feds freaked over Fable 5 after 'fix this code', not jailbreak, say researchers

By: Hacker News

Source: Hacker News

What's New

****Claim****

Federal concerns regarding Fable 5 were primarily due to its ability to respond to code prompts rather than its jailbreak capabilities.

****Evidence****

Researchers analyzed the interactions with Fable 5 and found that its responses to code-related queries raised significant alarm among officials. They noted specific examples where the AI demonstrated potentially problematic behavior when prompted to 'fix this code'.

****Method****

The study involved qualitative analysis of user interactions with Fable 5, focusing on responses to specific coding prompts. No formal experiments or quantitative metrics were detailed in the report.

****Limitations****

The analysis is largely anecdotal and lacks systematic testing or statistical validation. There are concerns about the generalizability of findings beyond the specific interactions observed.

****Safety relevance****

This highlights the need for more careful evaluation of AI systems' responses to technical prompts, suggesting that alignment efforts should also address capabilities related to code understanding and manipulation.
