

GPT-5.5 Instant System Card

By: OpenAI

Source: OpenAI

What's New

****Claim****

The GPT-5.5 model exhibits improved performance in various benchmarks compared to its predecessors.

****Evidence****

The evaluation included a series of standardized tests across language understanding, generation tasks, and reasoning capabilities, with reported improvements averaging 10-20% in key metrics. Sample sizes for these evaluations included thousands of prompts across diverse domains.

****Method****

The model was tested using a combination of human evaluations and automated metrics, employing datasets curated for language tasks, including common benchmarks such as GLUE and SuperGLUE.

****Limitations****

The improvements reported may not generalize across all tasks and domains, and the benchmarks used may not cover all aspects of real-world language use. Additionally, reproducibility of results in independent settings has not been thoroughly assessed.

****Safety relevance****

This update indicates potential advancements in alignment capabilities, but raises questions about the robustness of safety measures in more complex, untested scenarios.
