

transformers v5.17.0 released

From: GitHub

Source: GitHub

The Brief

****What shipped****

Transformers v5.17.0 was released, featuring the HYV4 model.

****Capabilities****

HYV4 is a 780 billion parameter mixture-of-experts language model that activates 49 billion parameters per token. It has a context window of 1 million tokens and uses a routing mechanism that selects 8 experts from 256 available per token.

****Availability****

The availability details are not stated in the description.

****Why it matters****

This model offers a significant increase in context length and parameter efficiency, which can enhance performance in complex language tasks and applications requiring extensive context.

****Caveats****

The claims regarding performance and efficiency are unverified, and specific benchmark results or comparisons to previous models are not provided.
