The Decisions API is now generally available with gpt-6-luna.

From: OpenAI Platform

Source: OpenAI Platform

The Brief

What shipped
OpenAI made the Decisions API generally available with gpt-6-luna.

Capabilities
The API supports caching shared input across requests for prompt-cache discounts, images in individual question instructions, and structured data passed through input_json. Each request supports up to 400 questions, up from 200 in public beta.

Availability
The API is generally available at v1/decisions with gpt-6-luna. Pricing, regions, and access tiers are not stated.

Why it matters
You can send up to twice as many questions per request as in public beta and can use shared-input caching for prompt-cache discounts. Image instructions and input_json also let you provide those inputs directly in requests.

Caveats
The announcement does not specify discount amounts, image constraints, pricing, regions, or other changes since public beta.
