You can now choose which service tiers projects can use in Platform settings.

From: OpenAI Platform

Source: OpenAI Platform

The Brief

What shipped
OpenAI added controls in Platform settings to choose which service tiers projects can use.

Capabilities
Projects can be restricted to selected service tiers. Organization settings can restrict service tiers across all projects; specific tier names and configuration details are not stated.

Availability
The controls are available in Platform settings, according to the announcement. Pricing, eligible tiers, and any rollout or region limits are not stated.

Why it matters
You can constrain which service tiers projects in your stack are allowed to use, including applying a restriction organization-wide. This gives you a way to align project access with your tier policies; the announcement does not describe the effect on existing workloads.

Caveats
The announcement does not specify which tiers can be selected or what happens when a project attempts to use a disallowed tier. It points to separate documentation on service tier errors.

Full Announcement Details

OpenAI added controls in Platform settings to choose which service tiers projects can use. Projects can be restricted to selected service tiers. Organization settings can restrict service tiers across all projects; specific tier names and configuration details are not stated.
