Does Your Model Run on AWS Trainium? Look It Up

From: Hugging Face Blog

Source: Hugging Face Blog

The Brief

What shipped
Hugging Face published a torch-neuronx model-support Space and the public aws-neuron/torch-neuronx-model-support dataset to report which selected Transformers models run on AWS Trainium.

Capabilities
The Space lets engineers search models by Hub trending or download rankings, inspect results for selected neuronx-cc and Transformers versions, and retrieve the tested run.py script and stack details. Tests run 32-token generations on Trainium2, record core count and peak device memory, and mark a model as passing when its output passes the stated check.

Availability
The Space and dataset are public on Hugging Face; the Space provides scripts for running on a Trainium2 (trn2) instance, and a public NEFF cache can be synced to skip compilation. Pricing is not stated.

Why it matters
Before porting or deploying a Transformers model, teams can check tested compatibility and reproduce the run with the recorded software stack and script. The dataset can also be queried directly to compare results across compiler and library versions.

Caveats
Coverage is limited to selected Transformers text-generation and image-text-to-text models that fit on at most 4 Trainium2 devices (16 cores); diffusers and other tasks are not yet covered. A pass checks only a 32-token generation and does not establish throughput or longer-generation behavior.
