

## Antigravity 2.0 Tops the OpenSCAD Architectural 3D LLM Benchmark

By: Hacker News

Source: Hacker News

---

### What's New

#### **\*\*Claim\*\***

Antigravity 2.0 has achieved the highest score on the OpenSCAD Architectural 3D LLM Benchmark.

#### **\*\*Evidence\*\***

The system reportedly scored 256 points, surpassing previous models on this benchmark, although specific comparisons or baseline scores were not provided. The discussion includes 108 comments, which may provide additional insights or critiques but do not constitute formal evidence.

#### **\*\*Method\*\***

The evaluation was likely conducted using the OpenSCAD Architectural 3D LLM Benchmark framework, although details on the datasets and evaluation protocols used are not specified.

#### **\*\*Limitations\*\***

The claim lacks detailed methodology and context, making it difficult to assess the reproducibility of results or the significance of the score. Without comparative analysis against other models and clear evaluation criteria, the findings may not be generalizable.

#### **\*\*Safety relevance\*\***

This development highlights the ongoing advancements in LLM capabilities, which may raise new considerations for alignment and evaluation strategies in AI safety.
