DeepSeek search and fetch - $0.75 per 1000 successful requests

From: Hacker News

Source: Hacker News

The Brief

What shipped
DeepSeek shipped the Search API and Fetch API for accessing live web content.

Capabilities
The Search API retrieves structured results for web queries, returning up to 50 results per request. The Fetch API retrieves the content of a single web page in Markdown format. Both APIs support bearer authentication and return results in raw JSON format.

Availability
The APIs are available at https://api.deepseek.com with a pricing model of $0.75 per 1,000 successful requests. Billing starts on November 1, 2026, for server-side tool calls made through DeepSeek Harness, Claude Code, or Codex.

Why it matters
These APIs enable developers to integrate live web content into their applications, enhancing the capabilities of agents and retrieval-augmented generation (RAG) systems. The cost structure allows for scalable access to web data without incurring charges for failed requests.

Caveats
The APIs are read-only and subject to rate limits, including a per-domain QPS limit for the Fetch API. Successful requests are billed only when they return HTTP 200 with valid results, meaning developers must manage their queries carefully to avoid unnecessary costs.

Full Announcement Details

DeepSeek shipped the Search API and Fetch API for accessing live web content. The Search API retrieves structured results for web

queries, returning up to 50 results per request. The Fetch API retrieves the content of a single web page in Markdown format. Both APIs support bearer authentication and return results in raw JSON format.
