Putting Earth AI to work: Geospatial agents for our planet's biggest challenges

From: Google Research

Source: Google Research

The Brief

What shipped
Google Research released a technical report detailing the capabilities of the Geospatial Reasoning agent, which integrates Earth AI foundation models for complex spatial analysis.

Capabilities
The Geospatial Reasoning agent can perform multi-step geospatial reasoning across planet-scale data, utilizing models like WeatherNext and the Population Dynamics Foundation Model. It has been evaluated against four benchmarks, including GeoKTools and GeoExpertQueries, demonstrating significant improvements in spatial reasoning tasks compared to standalone LLMs.

Availability
Early access to the Geospatial Reasoning agent is available through Google Earth and Google Cloud, including an agent-to-agent API for developers. Specific pricing and general availability details are not stated.

Why it matters
This development allows engineers to leverage specialized geospatial tools and planning capabilities, improving the accuracy and efficiency of spatial analysis workflows compared to traditional LLMs. It enables integration of custom datasets with global models, enhancing predictive capabilities.

Caveats
The results and claims are based on evaluations that may not be independently verified, and access to the agent is currently limited to experimental phases with select partners. Further details on performance metrics and broader availability are not provided.
